Modernization Kit

For M200/M400/M400b/M600 Elevator Systems

New Innovative Controller & Motor!

Upgrade your existing Smoke Guard (SG) system with our next-generation controller and motor, now engineered without a clutch or damper. This modern redesign eliminates traditional failure points, providing smoother operation, increased reliability, easier troubleshooting, and reducing unexpected maintenance costs.

Designed for SG's M200, M400, and M400b systems manufactured from August 2005 to present and the Model 600 Reliance (Rev. 1-2)*; this upgrade lets you retain your screen, housing, and framework — while unlocking advanced performance and smarter diagnostics. In addition, the modernization upgrade process provides a cost-effective and timely **green** alternative to complete curtain system replacement by allowing the building to preserve wall, ceiling, and floor finishes and structure around existing elevators.

*For all other M600 models, please contact Smoke Guard for more information.

Clutch & Damper Eliminated
Fewer moving parts. Reduced maintenance. Smarter performance.

Features and Benefits

- **Green** upgrade solution allowing retention of wall, floor, and ceiling finishes and building structure
- Newly upgraded motor with enhanced performance
- Anti-nuisance curtain deployment technology reduces damage risks
- Modular magnetic design for fast, flexible installation without major building or equipment modifications and/or extensive downtime
- Improves system reliability, user safety and equipment life span
- Built-in decoder enables future programming capabilities
- Universal power supply supports international applications
- "Hold open" functionality and up to 5 retractions on battery power
- Advanced fault tracking and historical data logging for faster issue resolution
- Improved system code compliance, which minimizes the risk of authority having jurisdiction (AHJ) fines/penalties
